SUMMARY

Software engineer with experience building **scalable distributed systems**, **high-concurrency backend services**, and **event-driven microservice architectures**. Proven track record delivering production systems handling real-time data, asynchronous workflows, and multi-tenant workloads using **PostgreSQL**, **message queues**, **caching systems**, and cloud-native infrastructure.

EDUCATION

University of Waterloo

B.A.Sc. in Computer Engineering | 3.4 GPA

Waterloo, ON
Sept. 2020 – Apr. 2025

Relevant Coursework: Operating Systems, Programming for Performance, Software Design and Architectures, Computer Security

PROFESSIONAL EXPERIENCE

Venuiti Healthcare Inc. | Java, Spring Boot, TypeScript, React, ActiveMQ, PostgreSQL, Redis, Azure

Waterloo, ON
Aug. 2025 – Present

Full Stack Software Developer

- Designed and deployed a **production-grade distributed system** delivering **FHIR R4 APIs** consumed by **25+ external clients**, with strict latency and reliability requirements.
- Built a **real-time event delivery pipeline** using **message queues** and **WebSocket/SSE streaming**, enabling low-latency data propagation under concurrent load.
- Improved **system throughput by 40%** by redesigning asynchronous validation and processing pipelines using **queue-based fan-out patterns**.

Easier Emails | PHP, Laravel, MySQL, AWS (S3, IAM, EC2)

Waterloo, ON
July 2025 – Present

Software Engineer Lead — **AI-powered SaaS Startup**

- Architected a **multi-tenant SaaS platform** supporting concurrent client workloads with strict tenant isolation and high availability.
- Designed an **event-driven analytics pipeline** processing high-volume webhook traffic with deduplication and ordering guarantees.
- Integrated **cloud object storage** and **IAM-based access controls** for secure, scalable customer data handling.

PinPoint Information Systems | C#, .NET Core, gRPC, RabbitMQ, MySQL, Redis

Burlington, ON
Sept. 2024 – Dec. 2024

Software Developer Intern

- Developed and tested **distributed microservices** using **gRPC** and asynchronous messaging, simulating production failure and recovery scenarios.
- Decomposed a legacy monolith into **independently deployable services**, improving latency by 30% and enabling horizontal scaling.

Audioworks Technologies | TypeScript, Node.js, Express.js

Mississauga, ON
Jan. 2024 – Apr. 2024

Full Stack Software Developer Intern

- Developed backend services for media storage and **real-time notifications**, supporting **10K+ users** with <1% request failure rate.

MNP Digital | C#, ASP.NET, MySQL

Markham, ON
May 2023 – Aug. 2023

Software Developer Intern

- Developed **RESTful ASP.NET APIs** and optimized database queries, increasing **request throughput by 35%** for government-facing systems.

Digital Solutions Developer Intern

Sept. 2022 – Dec. 2022

- Automated and integrated enterprise workflows using **Microsoft Dynamics 365** and REST-based connectors.

PROJECTS

ARM-Based RTOS | C, ARM Assembly

- Built a **preemptive real-time operating system** for ARM with **priority-based scheduling**, context switching, and kernel-level system calls, focusing on **low-latency task execution** and correctness under concurrency.

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, C#, SQL, Rust, PHP

Backend & APIs: REST APIs, gRPC, WebSockets, Server-Sent Events, OAuth 2.0

Distributed Systems: Event-driven architectures, async processing, message queues, caching systems (Redis)

Datastores: PostgreSQL, MySQL, MongoDB

Cloud & Infrastructure: AWS (EC2, S3, SQS), Docker, Kubernetes, Linux

Observability & Delivery: Centralized logging, monitoring, CI/CD pipelines
